2 points for each correct answer   10**3 Now use words from the box in exercise 2 to complete the text. There are two words you don't need.**

The two main kinds of honeybee that are kept by beekeepers for either personal or commercial purposes are *A. mellifera* and *A. cerana indica*.

These two <sup>1</sup> \_\_\_\_\_ can be easily moved from place to place without ever having to remove the bees from their homes, which are known as hives.

Honeybees seem to originate in the south and south-eastern regions of Asia. In fact, almost all types of bee come from this <sup>2</sup> \_\_\_\_\_. Bee numbers in Western countries have been falling steadily for many years now, and unpredictable weather and new agricultural practices, among other things, have been blamed for the <sup>3</sup> \_\_\_\_\_.  
 \_\_\_\_\_.

Honeybees cease moving around outdoors when the weather gets cold; once temperatures reach about 10°C, they <sup>4</sup> \_\_\_\_\_ back to their hives. There, they gather around the queen bee in an effort to stay warm, a practice known as the 'winter cluster'.

We all know that we get the <sup>5</sup> \_\_\_\_\_ we eat from bees, but did you know that bees themselves use their stored stocks of this food to generate body heat during the winter season?

- 9 *With* / *Without* warning, the fire alarm suddenly went off and we all had to leave the building.
- 10 It'll probably take us a few hours *on* / *at* the very least to travel to the ski resort.

### 6 Read the article about corporate fitness programmes.

#### Corporate Fitness

Companies are coming to the realization that desk-based jobs constitute occupational hazards. Consequently, they are investing large sums of money to keep their employees physically and mentally healthy and productive. And it's predicted that within a decade or so, such programmes will be so common that people will not accept a job in organizations without one.

Informed sources argue that this trend is not just a temporary one. According to one business health expert, there will be very few major companies that won't have become involved over the next few years. He explains that many companies have already implemented elaborate fitness operations, costing millions of dollars, as a means of both recruiting employees and improving their corporate image.

However, the drive for business fitness involves much more than mere recruitment. Industry in many countries suffers huge losses each year as a result of reduced productivity due to employee illness or stress. Indeed, it has been officially estimated that backaches alone cost industry millions of dollars. Such statistics have shaken large corporations into a realization that drastic measures need to be taken to get desk-based employees out of their seats.

Corporate fitness is no longer the joke that it once was. Physical exercise is being practised by all shapes and sizes of CEOs with the same kind of determination they used to show only in the boardroom. Some organizations have even reported that employees are happy to go on a waiting list to join their various fitness programmes, such is the demand.

What, though, are the benefits that may realistically be expected from all this physical effort? Several studies that have been carried out so far suggest that they are of considerable value. At one company, for instance, a study was carried out on 185 workers and their spouses. The study participants had not previously reported heart conditions, but, nevertheless, they were trained by a team of experts in an effort to improve

their hearts. Initially they had their blood pressure, stress levels, body fat percentage, etc. measured and six months later, more than 50% of the study subjects had slipped from the high-risk to the low-risk category. This improved health status also meant a substantial decrease in medical claim costs per head when compared with the previous year.

Although the value of corporate fitness programmes has not been scientifically proven, the fitness movement is unlikely to run out of steam in the near future. Some experts are of the opinion that physical fitness could well become a required condition of employment. In the future, it is probable that employees whose ambition is to move up the corporate ladder may have to show their superiors that they are not only mentally but also physically fit.

Further developments have involved companies checking out the physical health of prospective employees before hiring them. Legal problems could result if this were interpreted as discriminatory, but with companies paying so much of their employees' health costs, many of them consider that they have a right to know about prospective employees' physical limitations.

Employers have been increasingly having more of a say in the lives of their employees. In the field of health care, for example, what started out some years ago as basic plans have since developed into full medical coverage for the worker and their whole family. Dental and eye-care plans are also included now. And along with physical fitness comes another corporate trend – employee assistance programmes for people with personal issues. Under these arrangements, employees are offered professional counselling services at the company's expense.
