

Fill in the gaps with the correct label. You can refer to page 4 for examples.

BATS

They are the only flying mammals.
Their wings are made of leathery skin.

Do you know?

- There are 900 species of bat, living on all continents except Antarctica.
- Most bats sleep during the day, hanging upside down in caves, attics and other dark places. They come out at night to hunt.
- Bats find things in the dark by giving out a series of high-pitched clicks—the bats tell where they are and locate prey from echoes. This is called **echolocation**.
- Bats are not blind—their eyesight is as good as that of most human
