

Unit 2: Human Interaction and Reproduction (LIVEWORKSHEET (1))

Our **sense organs** detect information from the environment.

VISION

HEARING

SMELL

TASTE

TOUCH

What are the **sense organs** for each of these senses?

The nervous system

Our nervous system controls all **v** and **i** movements. It also coordinates all the activities and functions of our body.

Brain:

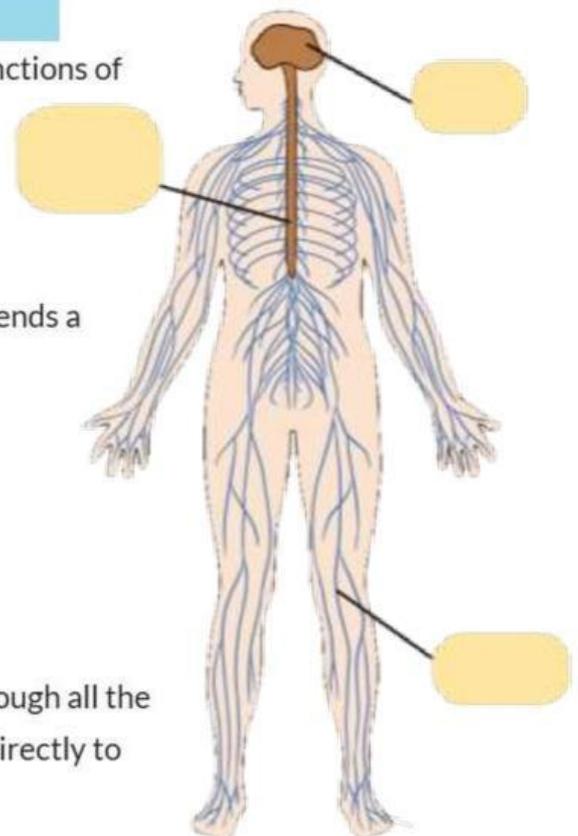

- The brain **controls** our body.
- When it gets a signal from the senses in our body, it sends a **message** to our **muscles or glands** to react.

Spinal Cord:

- It's like a motorway.
- It connects the **brain** to the nerves.

Nerves:

- When they receive information, the signal is sent through all the **nerve** cells until it reaches the **spinal cord** and then directly to the **brain**.

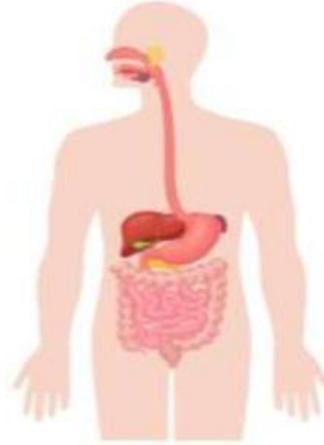

What are these people doing?

Are they voluntary or involuntary movements?

This is a boy _____

Voluntary/Involuntary

This is a person doing _____

Voluntary/Involuntary

This is a woman _____

Voluntary/Involuntary

This is a boy _____

Voluntary/Involuntary

This is a boy _____

Voluntary/Involuntary

These are girls _____

Voluntary/Involuntary

This doctor is checking the girl's _____ action.

Voluntary/Involuntary
