Singapore is a fascinating place. It's a giant floating city 130 kilometres north of the Equator. The city has four official languages – Chinese, Malay, Tamil and English. English is the language everyone uses for official business and all the schools teach English.

Singapore is one of the smallest countries in the world, but it is also one of the richest. For years it has been famous for its high level of education – and it's the number one country in the world for teaching Maths. Most people think that Asian schools in general are very strict. Is this the secret of Singapore's real success, too? Not at all! If you walk into a Maths class in a primary school in Singapore, you can see how active and noisy it is. Children don't sit quietly on their chairs watching their teacher at the board and writing sums in their notebooks. You can see a lot of activity and hear a lot of noise.

School starts at the age of seven in Singapore. The Maths programme starts very slowly and the younger children spend a lot of time on the first steps. They use everyday objects, like fruit, to feel and see the basic ideas. They don't copy from the board or do exercises in their books – they learn Maths through playing. A lot of schools around the world have tried it out – the UK for example, and the USA. And it's been a great success.

Task A: Circle T for True and F for False

- 1 In Singapore all schoolchildren learn English at school.
- 2 Students are good because teachers are strict.
- 3 Maths is taught in a really interesting way.
- 4 Students eat fruit in Maths lessons.
- 5 The text is about the richest city in the world.
