

Animals in the Future – Will & Going To

Reading Section

Scientists believe that animals will face many changes in the future. Some species will adapt, and others are going to move to new places. For example, polar bears will look for food in new regions because temperatures will rise. Many birds are going to migrate earlier due to faster climate changes. In the Amazon, animals are going to develop new behaviors to survive with less water. Humans will create protected areas, but we are also going to need stronger laws to help endangered species.

4 Multiple Choice Questions

1. Why will polar bears look for food in new regions?

2. What are birds going to do earlier?

3. What will humans create to help animals?

4. What are animals in the Amazon going to develop?

2 True or False Questions

5. Birds will migrate later because the weather changes slowly. _____

6. Humans are going to need stronger laws to protect animals. _____

1 Matching Question

Match the animals to the correct prediction. Write the number next to each letter.

Animals

A. Polar Bears _____

B. Birds _____

C. Amazon Animals _____

Predictions

1. Will search for food in new regions
2. Are going to migrate earlier
