

# EXCRETORY SYSTEM

1. Drag the words into the correct place.

2. HOW DOES THE EXCRETORY SYSTEM WORK? Complete.

1. Blood enters the                      . The                      filter the blood, removing waste and extra water.
2. The clean blood goes back into the body. The waste and water become urine which travels down two tubes called                      .
3. The urine moves into the                      and it stores the urine until is full.

4. When the bladder is full, the \_\_\_\_\_ sends a signal that it's time to go to the bathroom.
5. The urine leaves the bladder through a small tube called \_\_\_\_\_
6. Now the blood is clean again and ready to start the cycle once more.
