IV. Read carefully and write T (True) or F (False). (4 points)

Lorm Glove

Imagine a world where you can't see or hear anything. It's difficult to imagine, isn't it? Edi Haug is one of many young people around the world who are deaf-blind. Edi lost his ability to see and hear when he was young. As a child, Edi communicated with a made-up language using touch. He is older now, and he communicates in Lorm. It's a sign language. It uses different locations on the hand for the letters of the alphabet. It isn't easy for Edi to make friends because few people know Lorm. Today friendship is mostly made through social media, not touch.

However, the Mobile Lorm Glove might help young people like Edi. It was invented by Tom Bieling in Germany. Tom hopes his machine can improve the lives of deaf-blind people by giving them easy access to the Internet. Edi touches different parts of the glove to write his message to his computer. The glove can also send messages to him. Edi now has a lot of friends on social media who don't even know he is deaf-blind. With more work, Tom hopes anyone can use his machine; for example, those who work in noisy locations, not just deaf-blind people.

14. Edi Haug has always had an easy time making friends. _____
15. Lorm is not a common language. _____
16. People need to know Lorm to send messages to the glove. _____
17. The Mobile Lorm Glove will only be for deaf-blind people. _____

V. Listen. Write T (True) or F (False). (6 points) File 5

18. Technology is affecting the way families interact with one another. _____
19. Both families were able to live without technology for a year. _____
