

Name: _____

Class: _____

2. Fill in the blanks with the correct words from the box. One word for each blank.

certificate course essay instructions
level mark project term test

At the beginning of the _____, students receive a list of classes to choose from. Each _____ includes helpful _____ about what they will learn and what is expected.

Some classes ask students to complete a written _____ or a group _____. In other classes, students need to take a final _____ at the end.

Throughout the course, teachers check the student's _____ to make sure the material is suitable. After each task, the teacher gives a _____ based on the student's performance.

If students complete everything well, they receive a _____ at the end to show they have passed the _____.

3. Read the passage and answer the questions.

Why Do Some Students Study Better Than Others?

Have you ever wondered why some students always seem to do well at school? It's not always about being "smart", often, it's because they've found effective ways to study.

Research shows that students who plan their time carefully and avoid distractions usually perform better in exams. Instead of trying to memorize everything the night before a test, successful students review their notes regularly and take short breaks to keep their minds fresh.

Another useful method is active learning. This means doing something with the information, like teaching it to someone else, writing a summary, or creating a quiz. These strategies help the brain remember facts for longer.

Surprisingly, the place where students study also matters. A quiet, well-lit space without phones or other electronic devices helps people focus. Meanwhile, studying while watching TV or checking social media can reduce concentration and make it harder to remember information later.

In the end, everyone learns differently. But by trying different strategies and paying attention to what works best, any student can become a more effective learner.

Question 1. According to the text, why does time management contribute to academic success?

A. It allows students to complete assignments right before deadlines.

B. It prevents the need for reviewing materials.

C. It encourages consistent study and reduces last-minute stress.

D. It gives students more time to socialize.

Question 2. What is the advantage of using active learning strategies like summarizing or explaining to others?

A. They make studying more passive and relaxing.

B. They help reinforce understanding and memory.

C. They allow students to avoid difficult content.

D. They reduce the need for reviewing information later.

Question 3. What kind of environment does the article suggest is most beneficial for focus?

A. A place with background noise and multitasking opportunities.

B. A space where learners feel emotionally comfortable, regardless of distractions.

C. An organized, quiet area with minimal interruptions.

D. A shared study room with frequent discussions.

Question 4. Why does the author suggest that each student should discover their own study approach?

A. Because all techniques are equally effective.

B. Because teachers cannot guide every student.

C. Because what works for one person may not suit another.

D. Because no study method has been proven to work.

1. Which study strategies are mentioned in the reading?

2. Which of these strategies do you think is the most useful? Why?

3. Are there any study strategies you use that were not mentioned in the reading?

4. Describe a learning method that you think is interesting and easy to understand.

You should write about (at least 250 words):

- What the method is and how it works
- Why you think it is useful
- When or how you use it (e.g., at home, in class, online...)
- Whether you would recommend it to others and why

Suggestions:

- Watching videos or movies with subtitles
- Using flashcards to learn vocabulary
- Making mind maps
- Recording and listening to your own notes
- Studying in groups / teaching someone else
