

Actividad 1

1. Encuentra los valores desconocidos.

Ejemplo:

$$13 + \boxed{\quad} = 46 \longrightarrow 13 + \boxed{33} = 46$$

$$\begin{aligned} 26 + \boxed{\quad} &= 50 \\ \boxed{\quad} + 56 &= 80 \\ 90 + \boxed{\quad} &= 105 \\ 39 + \boxed{\quad} &= 199 \\ \boxed{\quad} + 28 &= 56 \end{aligned}$$

$$\begin{aligned} 38 - \boxed{\quad} &= 12 \\ 46 - \boxed{\quad} &= 30 \\ \boxed{\quad} - 50 &= 105 \\ \boxed{\quad} - 34 &= 21 \\ 300 - \boxed{\quad} &= 91 \end{aligned}$$

2. Actividad Despeja las ecuaciones, encuentra el valor de cada variable.

$$1) 6 + x = 8$$

$$x = \boxed{\quad}$$

$$2) y + 10 = 35$$

$$y = \boxed{\quad}$$

$$3) 12 + 2 = b$$

$$b = \boxed{\quad}$$

$$4) 20 - g = 10$$

$$g = \boxed{\quad}$$

$$5) 10 - h = 7$$

$$h = \boxed{\quad}$$

$$6) t + 100 = 200$$

$$t = \boxed{\quad}$$

$$7) 17 - e = 66$$

$$e = \boxed{\quad}$$

$$8) 14 + 16 = c$$

$$c = \boxed{\quad}$$

$$9) 150 - k = 90$$

$$k = \boxed{\quad}$$

$$10) w + 4 = 36$$

$$w = \boxed{\quad}$$

Actividad 3

3. Realiza el despeje correspondiente de cada ecuación

Ejemplo:

$$2X + 20 = 45$$

$$2X + 20 \quad \boxed{-20} = 45 \quad \boxed{-20}$$

$$\frac{2X}{2} = \frac{25}{2}$$

$$X = \boxed{12.5}$$

$$3X + 21 = 46$$

$$3X + 21 \quad \boxed{} = 46 \quad \boxed{}$$

$$3X = \boxed{}$$

$$3X = \boxed{} \\ \boxed{}$$

$$X = \boxed{}$$

$$4X = 88$$

$$\boxed{} \quad \boxed{}$$

$$X = \boxed{}$$

$$\frac{X}{2} + 10 = 14$$

$$\frac{X}{2} + 10 \quad \boxed{} = 14 \quad \boxed{}$$

$$\frac{X}{2} = \boxed{}$$

$$\boxed{} \quad \frac{X}{2} = \boxed{} \quad \boxed{}$$

$$X = \boxed{}$$
