

COMPREHENSION PRACTICE

BY TEACHER NATPICHA PROMJAD CNP.

Name.....Class.....No.....

Read the passage carefully.

Dolphins are intelligent marine animals that live in oceans and some rivers around the world. They are mammals, which means they breathe air and give birth to live babies. Dolphins are known for being friendly and playful. They often live in groups called pods.

Dolphins eat fish and squid. They use a special ability called echolocation to find food and navigate in the water. This means they make sounds and listen to the echoes to know where objects are.

Although dolphins are fast swimmers and have few natural predators, they still face dangers. Pollution, fishing nets, and human activities can harm them. Many organizations work to protect dolphins and their habitats.

Answer the questions.

1. What is the main topic of this passage?.....
2. What kind of animal is a dolphin?.....
3. How do dolphins find their food?.....
4. What do dolphins eat?.....
5. What dangers do dolphins face?.....
6. Why are dolphins considered intelligent animals?.....
7. Should humans help protect dolphins? Why?.....
