Educating the Gifted

What is a **gifted** child? There are different ways to define this term. It may refer to special talents in the arts or to a high level of academic abilities. A child may be **gifted** in one specific area, such as music, or have talents in many areas. According to the U.S. National Association for Gifted Children, a **gifted** child shows an "exceptional level of performance" in one or more areas. In general usage, giftedness includes high levels of cognitive ability, motivation, **inquisitiveness**, creativity, and leadership. Gifted children represent approximately 3 to 5 percent¹ of the school-aged population.

Although giftedness cannot be **assessed** by an intelligence test alone, these tests are often used to indicate giftedness. By and large, giftedness begins at an IQ of 115, or about one in six children. Highly **gifted** children have IQs over 145, or about one in a thousand children. Profoundly gifted children have IQs over 180, or about one in a million children. Because very few education programs include any courses on teaching the gifted, teachers are often not able to **recognize** the **profoundly** gifted. Teachers are more likely to **recognize** moderately gifted children because they are ahead of the other children but not so far ahead as to be unrecognizable. For instance, children who can read older children's books in first and second grade are often **transferred** into gifted classes, but children who are reading adult books are told to stop reading them. Those **profoundly gifted** students who are not **recognized** often **turn into** discipline problems when they are not offered **constructive** ways to focus their **extraordinary** creativity.

The practice of creating a separate, **enriched curriculum** for gifted students began in the early twentieth century. At that time, social scientists noted that gifted children often speak, read, and move at an earlier age than their **peers**. At a younger age they are able to work at a higher conceptual level, develop more **sophisticated** methods to solve problems, and show more creativity in their methods and **interpretation** of assignments. After the first schools for the **gifted** were established, these students were followed for many years to see if **enriched** education made a difference. It did. Gifted students who were grouped together and taught a special **curriculum** earned fifty times more doctoral degrees than gifted students who were not given an **enriched curriculum**. When gifted programs² have been cut, the parents of the participants have reported decreased **inquisitiveness**, motivation, and energy levels in their children, and a **simultaneous withdrawal** from the class-

room experience. Identified **gifted** students who attend schools without any program for the **gifted** show a steady decrease in motivation and test scores between first and sixth grade.

There are still very few opportunities for educating the **gifted** in the lowest socioeconomic levels. The schools that service the poorest areas often **dedicate** their efforts toward **remedial** teaching rather than accelerated curriculum, and students with **extraordinary** talents are often not **recognized**. About 25 percent of the world's **gifted** population are too poor to be noticed.

Answer the questions about **Educating the Gifted**.

Questions 1-9

Complete the summary using words from the list below.

Gifted children are children with **1**..... talents. Their talents may be artistic or academic. There are different levels of giftedness.
