-The study of sound, rhythm, and songs _____

-The study of matter, energy, and forces _____

-The study of written works like stories and poems _____

LIVEWORKSHEETS

Read the text and choose the correct option

Organic food is very popular nowadays. It can also be quite expensive. Some organic products cost much more than non-organic ones. Parents of young children, and even some pet owners, are willing to pay higher prices for organic food because they believe it is healthier. However, other people think organic food is simply a waste of money.

One important difference between organic and non-organic food is how it is produced. Organic farms do not use agricultural chemicals like pesticides to protect crops from insects. In many countries, food labeled as organic must meet special standards to prove it is grown naturally.

Some people believe that organic food is also locally grown, and this used to be true. Over time, however, organic farming has become a large industry. Today, many organic products are grown by big agricultural companies and transported long distances. Processed foods made with organic ingredients are also becoming more common. At first, small companies produced these items, but as demand increased, larger companies joined the market. As a result, many small organic businesses struggled to compete and eventually closed.

Is organic food safer or more nutritious? This question is still debated. Some farmers and consumers believe that avoiding chemicals reduces the risk of illnesses. However, there is limited evidence to fully support this idea. Studies have shown that eating organically grown food may lower the risk of certain health problems, such as heart disease. On the other hand, experts emphasize the importance of food safety. Harmful bacteria can be found in both organic and non-organic foods, so washing fruits and vegetables carefully is essential. Meat and fish must also be handled properly to avoid contamination.

Doctors also advise reducing sugar intake, as too much sugar can harm health. Many processed foods, even organic ones, may contain high levels of sugar under different names like glucose or fructose. Because of this, it is important to read ingredient labels carefully. While organic food may taste better to some people, whether it is worth the extra cost depends on personal opinion. More research is needed to fully understand its benefits, but many people prefer it as a safer choice.

Why do some people buy organic food?

a) Because it is cheaper
b) Because they think it is healthier
c) Because it lasts longer
d) Because it is easier to find

What is a key difference between organic and non-organic food?

a) Organic food is always local
b) Organic food is cheaper
c) Organic farms do not use pesticides
d) Organic food is always processed

LIVEWORKSHEETS
