

Wild Animals and Their Habitats - Worksheet

Reading:

Wild animals live in different habitats around the world. A habitat is a place where animals find food, water, and shelter. For example, lions live in the savanna. Polar bears live in the Arctic. Monkeys live in the rainforest. Camels live in the desert because they can go many days without water. Fish live in water and use gills to breathe. Habitats are important because animals depend on them to live.

Multiple Choice:

- 1 1. What is a habitat? () A type of animal () A place where animals live () A kind of food () A color
- 2 2. Where do polar bears live? () Desert () Rainforest () Arctic () Ocean
- 3 3. Why can camels live in the desert? () They can swim () They eat fish () They can go without water () They live in trees
