

Endangered Animals

This animals are in danger of disappearing. This can happen because their homes are being destroyed, they are hunted too much, or they are not getting enough food. When an animal is endangered, there are very few of them left in the world.

Elephants are endangered animals. People hunted them for their tusks. They need a lot of food and big spaces to live. Humans are taking more of their homes.

Sometimes, elephants go near villages to eat plants, and this can be dangerous for people. Elephants are afraid of bees, so some people put beehive fences near their plants to keep elephants away. This is a safe way to protect plants and it doesn't hurt the elephants.

Koalas are also in danger. They live in Australia, a hot and dry country. In summer, there are wildfires. Wildfires destroy trees.

Koalas eat leaves from eucalyptus trees. They get water from these leaves. There are not many trees because of the wildfires, so koalas are thirstier. They sleep during the day and look for food at night. This is dangerous because people cannot see them on the roads. Some people help koalas by building fences. These fences help koalas move safely.

Vocabulary

1. READ AND CHOOSE

Elephants are hunted for their ears tusks.

Koalas eat flowers leaves from eucalyptus trees.

Wildfires create destroy trees

Elephants need don't need a lot of space.

2. TRUE OR FALSE?

Elephants are afraid of bees. TRUE FALSE
