- Question 29.** A. each B. every C. much D. many
- Question 30.** A. receive B. make C. take D. gain
- Question 31.** A. when B. which C. whom D. who
- Question 32.** A. Otherwise B. Therefore C. Furthermore D. However
- Question 33.** A. like B. likely C. alike D. likeness
- Question 34.** A. interests B. concerns C. pastimes D. attractions

Read the following passage and mark the letter A, B, C, or D on your answer sheet to indicate the correct answer to each of the questions from 35 to 40.

The Galapagos Islands are a group of islands in the Pacific Ocean, located about 1,000 kilometers from the coast of Ecuador. These islands are special because **they** have unique plants and animals that you can't find anywhere else in the world. For example, the giant tortoises, the blue-footed boobies, and the marine iguanas are some of the amazing creatures that live here.

Many scientists are interested in the Galapagos Islands because they are home to such rare species. Charles Darwin, a famous scientist, visited the islands in 1835. His observations of the animals there helped him develop his theory of evolution. Today, scientists still visit the islands to study the unique wildlife and learn more about evolution and conservation.

Tourists also love to visit the Galapagos Islands. They come to see the **incredible** animals and plants and to enjoy activities like snorkeling, diving, and hiking. However, too many visitors can harm the environment, so it is important to protect the islands.

To keep the Galapagos Islands safe, we need to respect the local wildlife and follow strict rules, like not touching the animals and staying on marked paths. Protecting the Galapagos Islands is important for both the animals that live there and for people who want to enjoy and learn from this special place for years to come.
