

READING COMPREHENSION

Challenges in a Mobile App Project

TechSolutions is a software company that develops mobile applications for businesses. The company is currently working on a mobile banking app for a national financial institution.

The project began six months ago, and the development team has completed several modules, including user registration, account management, and transaction history.

Recently, the team has faced some difficulties. The client requested additional security features after the initial design had been approved. As a result, developers had to modify several components of the application.

Furthermore, performance issues were discovered during testing. Some users experienced slow loading times and occasional crashes. The QA team identified these problems and reported them to the developers.

To address these issues, the project manager introduced weekly review meetings and implemented new testing procedures. The team is currently optimizing the code and improving system stability before deployment.

Although the release date has been postponed, the project continues to progress, and the client is satisfied with the improvements.

A. Fill in the gaps

(security – testing – deployment – crashes – stability – modules)

1. The application includes several _____.
2. The client requested additional _____ features.
3. Performance problems were found during _____.
4. Some users experienced system _____.
5. The team is improving system _____.
6. The final _____ has been postponed.

B. True or False

1. TechSolutions develops mobile applications. _____

2. The project is a gaming application. _____
3. The client requested new security features. _____
4. Users reported no performance problems. _____
5. Weekly review meetings were introduced. _____

GRAMMAR: USE OF ENGLISH

A. Present Simple vs Present Continuous: Complete the sentences using the correct form of the verb.

1. Software engineers usually _____ (test) their code carefully.
2. The team _____ (work) on a new security update right now.
3. The application _____ (store) user information in a database.
4. We _____ (fix) several bugs at the moment.

B. Past Simple vs Present Perfect

1. The developers _____ (finish) the update yesterday.
2. We _____ (find) several issues so far.
3. The client _____ (approve) the design last month.
4. The QA team _____ already _____ (report) the problem.

C. Past Perfect

1. The developers _____ (complete) the feature before the meeting started.
2. The server _____ (stop) working before the technician arrived.
3. The team _____ (not/test) the application when the problem appeared.

D. Passive Voice

1. The mobile app _____ (develop) using Flutter.
2. Several errors _____ (detect) during testing.
3. The update _____ (release) last week.
4. The issue _____ (report) by the users.

Vocabulary

A. Match the terms

Terms	Definitions
1. Server	a. A set of instructions written by programmers
2. Database	b. A computer that provides services to other computers
3. Code	c. A collection of organized information
4. Bug	d. The process of finding and correcting errors
5. Debugging	e. An error in a software program

B. Choose the correct option

1. A programmer writes _____ to create software.
 - a) code
 - b) budget
 - c) market
2. The application stores information in a _____.
 - a) database
 - b) browser
 - c) keyboard
3. The team found a _____ that caused the system to crash.
 - a) server
 - b) bug
 - c) update

Good luck! 🍀
