Fitness and health

by Dr. Charles Perry

A strong body is often the aim, if not always the result, of working out. However, "just because someone looks fit on the outside, it doesn't necessarily mean they are healthy on the inside," Dr. Michael Smith says. "Fitness and health, things that can and should be connected, are often very different things," he mentions.

Nutritionist Anna Jackson explains that "fitness is when your body gets used to exercise. If you lift a heavy weight, your body gets stronger so that the next time you lift that weight, it is better able to deal with that routine. Health can be explained as the lack of disease, but it also depends on environmental factors such as pollution or a poor diet."

Taking into account the previous definition of health, I could say it is possible to be healthy but unfit. As exercising does provide a level of protection from many medical conditions such as diabetes and heart disease, being fit increases your chances of being healthy and living a long life; however, being fit doesn't mean you won't suffer from poor health at some point.

You can be both fit and healthy. Honestly, extremes in exercise or poor diet choices can destroy your health. The charming benefits of running could be all but cancelled out by the health complications brought on by smoking or drinking too much. Everybody has to be very careful and understand that exercising won't give us a perfect health. Too much workout could reduce its benefits, and exercising always requires a well-planned diet to help our body gain the maximum.
