Reading Comprehension

Personality tests have become increasingly popular among students and professionals. These tests are designed to help people understand their behaviors, preferences, and strengths. One well-known example is the MBTI (Myers-Briggs Type Indicator), which divides personalities into 16 types. Others include the Big Five personality test and various online quizzes.

Some people use these tests to improve their communication or find careers that match their traits. For example, an extrovert might enjoy a job in sales or teaching, while an introvert may prefer writing or research. However, experts say that personality tests should not be taken too seriously. People are complex and can change over time.

Still, many enjoy taking them for fun or reflection. When used correctly, personality tests can be a useful tool for learning more about yourself and others.

④ Circle true or false.

- | | | |
|--|------|-------|
| 1. Personality tests are only used by students. | true | false |
