EQUIVALENT FRACTIONS

Learning Goal: to make equivalent fractions by multiplying or dividing by one whole.

Name: _____ Class: _____

Example: $\frac{6}{8} \div \frac{2}{2} = \frac{3}{4}$ (One whole)

a) $\frac{3}{5} \times \frac{2}{2} = \frac{\quad}{\quad}$

b) $\frac{12}{14} \times \frac{2}{2} = \frac{\quad}{\quad}$

c) $\frac{2}{3} \times \frac{3}{3} = \frac{\quad}{\quad}$

d) $\frac{4}{5} \times \frac{4}{4} = \frac{\quad}{\quad}$

e) $\frac{6}{7} \times \frac{2}{2} = \frac{\quad}{\quad}$

f) $\frac{10}{12} \div \frac{2}{2} = \frac{\quad}{\quad}$

g) $\frac{12}{15} \div \frac{3}{3} = \frac{\quad}{\quad}$

h) $\frac{8}{16} \div \frac{4}{4} = \frac{\quad}{\quad}$

i) $\frac{25}{30} \div \frac{5}{5} = \frac{\quad}{\quad}$

j) $\frac{16}{20} \div \frac{2}{2} = \frac{\quad}{\quad}$
