ALL 33 OF THEM

On the afternoon of 5 August 2010, disaster struck a copper and gold mine in Chile. Located in the Atacama Desert, 45 km north of Copiapo, the San Jose Mine caved in on itself, leaving 33 men trapped underground with little hope of escape.

The 121-year-old mine was a famously dangerous place to work and there had already been a number of fatal accidents there before. Actually, it was so dangerous that soon before the accident in 2010, experts advised the owners to close the mine down. However, they ignored the warning, and miners continued to work there. Then, while a group of 33 employees were on their lunch break in the mine, the roof of the mine collapsed. Buried 700 metres underground and 5 km from the mine's entrance, the men were trapped in an emergency shelter with very little food, water and air, and no way of contacting the outside world.

The Chilean government organised a rescue mission immediately. At first, nobody knew whether the miners were still alive or where their exact location was in the mine. So, the rescue team started drilling narrow holes deep into the mine hoping to find some signs of life. Seventeen days later, the drill came back with a note attached to the end of it. The note read "We are all well in the shelter, the 33 of us." Family and friends were delighted to hear the news and the rescue workers hurriedly brought in equipment to drill a hole wide enough for the miners to come up to the surface.

Over the next month, the miners received food and water, as well as messages and books through the drilled holes. The rescue team also lowered a video camera into the shelter, so that the miners could show the rescue team the conditions they were living in. It was obvious that the miners were trying to maintain their mental health by keeping themselves occupied with jobs, such as cleaning the shelter and organising their supplies. Also, they gave each other emotional support, so that no one gave up hope of surviving.

Soon, the rescue team managed to drill a hole big enough for the miners to emerge from the mine and on 13 October, 69 days after the accident, all 33 men were above ground again. Over 1 billion people from around the world watched the survivors appearing, and family, friends, and all Chileans celebrated their survival.

Today, people remember the 2010 Copiapo mining accident as a time when 33 men showed amazing courage to survive, helped by the efforts of a whole nation above them.

- 1 What is the writer's purpose?

Game 2

Students play in pairs or groups of three. Each pair or group gets a set of story start cards. Student A turns over a card and reads it to the group/pair. Then, student A continues the story by adding a sentence that contains one verb (in any past tense), one noun and one adjective/adverb. After student A completes their turn, the other students in the pair/group continue in the same manner. The sentences must be grammatically correct. Each correct sentence gets one point. If a student makes a mistake or cannot continue, one point is deducted and the student loses a turn. The pair/group with the most points after a certain amount of time (7-10 minutes) wins the game.

Sample Story Beginning Cards:

Student A turns over the following story beginning card:

► SA: *Suddenly, there was a loud knock at the door.*

The next student continues the story in the same way until the end of the game.
