The summer solstice, the first day of summer, has always been a special day. There have been summer solstice celebrations since ancient times. Some of these are still celebrated today. In Sweden, people celebrate this, the longest day of the year, by singing, dancing around a maypole, and enjoying special food and drinks. Unlike Sweden, people in Spain don't dance around a maypole. Instead, they dance in the streets. There are fireworks and bonfires. Some people even jump over the bonfires. People in both Sweden and Spain celebrate the summer solstice at the end of the day. However, at Stonehenge in the United Kingdom, thousands of people come together to celebrate at sunrise. They wear masks and costumes. The sounds of beating drums fill the air at this celebration. Very recently, scientists discovered a new member of the Homo group, Homo naledi, at a site in South Africa. They found many bones and teeth of adults, children, and babies. Some parts of the skeletons they found looked like those of modern humans, while other parts were not as advanced. For example, the skulls they found were much smaller than those of other members of the Homo group. Scientists believe that H. naledi could date back as far as two or three million years.

Since finding the bones, scientists have learned that *H. naledi* could climb trees and walk on two legs for long distances. There are thousands more bones still at the site. Studying them will be helpful in learning more about this species. It will also help us understand how its descendants changed into modern humans.
