

How does a tiny seed becomes a giant tree?

### **The Journey Begins**

Have you ever looked at a massive tree and wondered how it started? Believe it or not, every giant tree begins its life as a tiny seed!

### **Under the Ground**

First, a little acorn or seed falls softly from a parent tree and lands in the dark soil. It rests quietly underground, hiding safely away from the cold wind.

Next, warm rain falls from the sky and soaks deep into the earth. The wet soil gives the sleeping seed a big drink, which wakes it up and helps roots start to crawl downward.

### **Reaching for the Sky**

Then, a small green shoot pushes its way up through the dirt. It stretches eagerly toward the bright sunshine, soaking up warm light to grow stronger every single day.

Finally, years pass by. The thin stem grows into a thick wooden trunk, and the little shoot turns into a tall, leafy giant tree that provides shade for animals and people.

### **Reading Comprehension Questions**

1. What is the heading?

---

2. What does the section "**Under the Ground**" talk about?

---

### **Grammar & Vocabulary Questions**

#### **Nouns**

1. What is one noun in the first section ("**The Journey Begins**")?

---

2. What is one noun in the last section ("**Reaching for the Sky**")?

---

### Noun Phrases

1. What is a noun phrase in the "**Under the Ground**" section?

---
