City Hospital Hit by Cyberattack

A large city hospital has confirmed that it was the target of a cyberattack last weekend. Hospital officials said that several patients may have been the **1** ***people who were harmed*** _____ after their personal information was stolen.

The problem began when the hospital's **2** ***system of connected computers*** _____ stopped working unexpectedly. As a result, doctors and nurses were unable to access some medical records because the system **3** ***was not working*** _____ for nearly three hours.

Fortunately, the most sensitive files had been **4** ***protected by a special code*** _____, so the criminals could not read all of the information they found.

Police believe that experienced **5** ***people who illegally break into computer systems***

_____ were responsible for the attack. Experts are now working to **6** ***stop something from happening*** _____ similar incidents in the future by improving the hospital's security systems.

Officials have warned that many organizations remain **7** ***weak and easy to attack*** _____ if they do not regularly update their computer software.

READING

Cyber Attacks: Protecting Our Digital World

Over the past few years, cyber attacks have become one of the most serious challenges facing modern society. As businesses, governments, and individuals rely more heavily on digital technology, criminals have found new ways to exploit weaknesses in computer systems. A cyber attack can have consequences that go far beyond the loss of information, affecting people's finances, privacy, and even essential public services.

One of the most common types of cyber attack involves hackers gaining unauthorized access to a computer network. Their aim may be to steal confidential information, damage systems, or use stolen data for criminal activities. In some cases, hackers install malicious software known as ransomware, which prevents users from accessing their own files until a payment is made.

Large organizations are often attractive targets because they collect and store huge amounts of sensitive data. However, smaller companies can also be at risk because they may not have enough resources to develop advanced security measures. When customer information, such as bank details or personal records, is stolen, the people affected can become victims of identity theft or financial fraud.

Cyber attacks can also create serious difficulties for hospitals, universities, and government institutions. For example, if a hospital's computer network is temporarily unavailable, medical staff may experience delays when trying to access important patient information. This shows that cybersecurity is not only a technical issue but also a matter of public safety.

Fortunately, there are several steps that can help prevent cyber attacks. Individuals should use strong passwords, activate additional security features, and be careful when opening unknown emails or links. Organizations should regularly update their systems, train employees, and create backup copies of important data.

Although it is impossible to eliminate all cyber threats, greater awareness and responsible online behavior can significantly reduce the chances of becoming a victim. In an increasingly connected world, cybersecurity is a shared responsibility that requires attention from everyone.

1. Read the text and decide whether the statements are True (T) or False (F).

1. Cyber attacks have become less common as technology has developed. _____
2. Hackers may attack systems in order to steal confidential information. _____
3. Ransomware allows users to access their files without any restrictions. _____
4. Only large companies need to worry about cybersecurity problems. _____
5. Smaller businesses may be more vulnerable because they often have fewer security resources. _____
6. The effects of cyber attacks can include financial and privacy problems. _____

LIVEWORKSHEETS

7. A hospital cyber attack can only affect the hospital's computer equipment. _____
8. Employees can play an important role in preventing cyber attacks. _____
9. Creating backups of important information can improve an organization's security. _____
10. The text suggests that cybersecurity is the responsibility of IT specialists only. _____

_____ /10
