

SESSION 4

My Future Starts Today

Donnie is sixteen years old, and he has many dreams for his future. He is going to finish high school next year, and after that, he is going to apply for a scholarship to study engineering at university.

He loves technology and robotics because he believes they will change the world. Donnie spends several hours every week building small robots, and he thinks artificial intelligence will become even more important in the future.

This summer, Donnie and his classmates are going to attend a technology camp. They are going to learn programming, electronics, and teamwork. They are also going to meet students from different cities and share new ideas.

Donnie's teachers believe he will become an excellent engineer one day. They say he is responsible, creative, and hardworking. His parents always encourage him to follow his dreams and never give up.

Besides studying, Donnie is going to improve his English because he wants to work for an international company. He knows that speaking another language will open many opportunities and help him communicate with people around the world.

Donnie understands that success doesn't happen overnight. He knows there will be challenges, but he is ready to work hard every day. His future hasn't arrived yet, but he is already building it with dedication, discipline, and confidence.
