

QUIZ 2 IN MATHEMATICS 10
TERM 1
School Year 2026 - 2027

Name: _____

Date: _____

Grade & Section: _____

Teacher: _____

PART I: TRUE OR FALSE: Read each statement carefully. Type TRUE if the statement is correct and FALSE if it is incorrect. (1 point each)

- _____ 1. The Cartesian plane is formed by two perpendicular number lines called the x-axis and y-axis.
- _____ 2. The y-coordinate tells how far a point is located to the left or right of the origin.
- _____ 3. The point (0, 0) is called the origin.
- _____ 4. Sliding a figure without turning or flipping it is an example of a translation.
- _____ 5. A reflection changes a figure into a mirror image across a center of rotation.
- _____ 6. Turning a figure 90° counterclockwise about the origin is an example of a rotation.
- _____ 7. A 180° rotation about the origin maps (x, y) to $(-x, -y)$.
- _____ 8. For $(q - 4)(q + 2) \geq 0$, the critical points are $q = -2$ and $q = 4$.
- _____ 9. If (x, y) is translated by the rule $(x, y) \rightarrow (x + 3, y - 5)$, both coordinates increase by 3.
- _____ 10. The inequality $x^2 - 7x + 10 < 0$ has critical points $x = 2$ and $x = 5$.

PART II: A. Apply the transformation, draw the image on the Cartesian plane, and write the ordered pairs of the image.

For the graph of the image in Part A and the graph of the solution in Part B, please submit a clear picture of your answers through the LMS.

📌 Important: Make sure that your name is clearly visible in the photo you submit.

Translate the preimage using the translation rule $(x - 2, y - 2)$

A' (_____ , _____)

B' (_____ , _____)

C' (_____ , _____)

D' (_____ , _____)

Reflect the preimage about $y = -x$

E' (_____ , _____)

F' (_____ , _____)

G' (_____ , _____)

H' (_____ , _____)

Rotate 180°
$I' (\quad , \quad)$
$J' (\quad , \quad)$
$K' (\quad , \quad)$
$L' (\quad , \quad)$

B. Solving Quadratic Inequalities: For each inequality, write the solution in interval notation and graph the solution on the number line.

1. Solve: $-8 \leq x < 2$

Interval notation: _____

2. Solve: $x^2 - 5x + 6 < 0$

Interval notation: _____
