

2 Read and complete.

Name:

Characteristics:

Habitat:

Diet:

Butterflies are insects. They have got six legs and four wings. They live in all the continents except in Antarctica.

Butterflies go through four stages in their life cycle: egg, caterpillar, pupa and adult butterfly.

Butterflies drink nectar from flowers and they can taste with their feet. They can see ultraviolet colours that are invisible to the human eye.

Butterflies are important because they collect pollen and carry it to plants. This helps plants to produce new seeds. Butterflies are a sign of a healthy environment.
