- measure precipitation (e.g. rain, snow, hail or sleet) in a certain amount of time.
- instrument for measuring or showing temperature (how hot or cold something is).
- carries instruments in the sky to send back information on atmospheric pressure, temperature, and humidity
- instrument used to measure air pressure.
- used to measure wind speed
- device with a freely rotating pointer used to indicate the direction of the wind.
- used to show where precipitation is. Weather radar can tell the movement of precipitation, what type it is (rain, snow, hail, etc.) and forecast its future.
