C. Complete each future real conditional sentence using the words in parentheses.

You _____ (feel) sick if you _____ (eat) all that candy.

If Victor _____ (cook) more vegetables, he _____ (get) healthier.

I _____ (take) a walk if it _____ (not rain) today.

READING COMPREHENSION

KEEPING COOL

It's hot, really hot. There's no swimming pool or air conditioning. You should reach for an ice-cold glass of water or maybe a dish of ice cream, right? Wrong, at least according to people who live in hot, tropical climates. How about a cup of hot tea or a spicy dish full of chilies instead? Just listen to people in India, where hot tea is the most popular drink. Or ask people in Mexico, where archeologists have found evidence that ancient people were cooking up hot, spicy drinks more than 2,400 years ago!

spicy salsa—Mexico

hot chai tea—India

So why are hot drinks and spicy foods so popular in hot climates? At first glance, this doesn't make a lot of sense. But if you look a little closer—at the science behind body temperature—it makes perfect sense because hot drinks and chilies can actually cool you down. Here's how it works: Your body temperature stays within about one degree of the normal body temperature. If your temperature goes higher, your blood begins to move toward the surface of your body. This causes your body to sweat. As a result of the sweat evaporating, you start to feel cooler and your body temperature goes back down.

How do the hot drinks and chilies fit into this picture? You have temperature sensors in your mouth, along your tongue, and all the way down into your stomach. When hot drinks, like tea or coffee, hit those sensors, they send a signal to your brain. Some foods, like ginger and black pepper, but most of all, chili peppers, cause those sensors to respond in the same way. Then the brain sends out a message: Start sweating! You may not like sweating, but it is extremely important, especially in hot climates, because the body cools down when sweat evaporates.

So, what about that ice-cold glass of water? Will it cool you off? It can actually have the opposite effect. The sensors in your mouth will tell your brain, "Ah, nice and cool." As a result, the brain sends out the message, "Time to stop sweating"—exactly what you don't want. However, keep in mind that when you sweat, your body loses water, so drinking water on hot days is still very important. You just might want to leave out the ice cubes.

A What is the main thing readers can learn from this article? Circle the correct answer.

- a. Hot drinks and spicy foods can keep you cool.
- b. Your body sometimes has trouble keeping you cool.
- c. Sweating is a signal that you are too hot.

B Circle the correct answers.

- 1. What causes body temperature to go down?
 - a. body staying at normal temperature
 - b. blood getting cooler
 - c. sweat evaporating

2. What do hot drinks have in common with spicy food?
 - a. They keep your body temperature within one degree of the normal temperature.
 - b. They block temperature sensors from sending signals to the brain.
 - c. They cause your body to sweat.
3. Why is important to drink a lot of water when it is hot?
 - a. It replaces the water we lose in sweat.
 - b. It keeps your blood moving quickly.
 - c. It makes your sweat evaporate more quickly.

C FOCUS ON LANGUAGE Reread lines 8-15 in the blog post. Think about the phrases *make sense* and *fit into the picture*. Circle the correct answers.

1. The expression *make sense* means _____.
 - a. have a meaning you can understand
 - b. be useful
 - c. feel right
2. The expression *fit into the picture* means _____.
 - a. be related
 - b. explain something difficult
 - c. show how something looks

D Read the Reading Skill.

1. Reread the article. Underline words and phrases that signal cause or effect.
2. Write *C* (cause) and *E* (effect) next to the correct event in each pair.
 - a. ____ you sweat
 ____ your blood moves to the skin's surface
 - b. ____ you drink something hot or eat something spicy
 ____ sensors in your mouth send a signal to your brain

READING SKILL

Identify cause and effect

Writers use signals like *because*, *so*, *as a result*, *cause*, *result in*, *lead to*, *consequently*, and *therefore* to show a cause-and-effect relationship. Sometimes the order in which the writer reports the events or actions can also help you see the cause-and-effect relationship.

- c. ____ you feel cooler
 ____ sweat evaporates
