

Daily Standups & Project Updates

Read the conversation. Match the questions to the answers.

- Are you currently facing any blockers or technical challenges? How do you plan to resolve them?
- Can you describe a recent bug you found and the steps you took to fix it?
- How do you estimate how long a specific task or user story will take you to complete?
- What did you work on yesterday, and what are your main priorities for today?

• Q1: _____

Answer: "Yesterday, I **focused on refactoring** the authentication module and managed to **clean up some technical debt**. Today, my main priority is to **integrate the new payment gateway API** and start writing unit tests for it."

• Q2: _____

Answer: "Yes, I've **run into a blocker** with the third-party webhooks; they aren't returning the expected payload structure. I'm currently **deep-diving into their API documentation**, and if I can't resolve it by noon, I'll **reach out to** a senior backend dev for a pair-programming session."

• Q3: _____

Answer: "I usually **break the story down into smaller sub-tasks** first. Then, I compare it to similar features we've built in the past and **factor in a buffer** for unexpected bugs or deployment issues before final approval."

• Q4: _____

Answer: "We noticed a memory leak that caused production servers to crash under heavy load. I **reproduced the issue** in our staging environment, used Chrome DevTools to **trace the root cause** to an unhandled event listener, and **deployed a hotfix** to patch it."
