Parts of a Plant
(Orchid Plant)

Plants have different parts. Each part has a job!

Flower

The flower helps the plant make seeds. It also attracts insects for pollination.

Bud

The bud will grow into a new flower.

Stem

The stem supports the plant and carries water and nutrients.

Leaf

The leaf makes food for the plant using sunlight.

Roots

The roots absorb water and nutrients and help the plant stay in place.

Healthy plants make a greener world!
