

Make the adaptation as being Structural or Behavioural.

Use B for Behavioural

Use S for Structural

Use **S and B** for both

Make sure you use a CAPITAL LETTER

Leaves help a plant absorb light.	Sharp claws are used for digging.	A squid releases black ink when threatened.
A stinkbug releases a terrible smell when threatened.	Rabbits have large ears to hear when predators are near.	Ducks have webbed feet to help them swim.
Crocodiles have sharp teeth for tearing meat.	A porcupine uses its quills for protection.	Thick fur keeps the polar bear warm.
A puffer fish can make itself twice the size if a predator is near.	Possums eat at night to help protect them from predators.	Owls have large eyes to help them see when hunting at night.
The water-holding frog buries itself underground when times are dry.	The mountain pygmy possum hibernates over winter when food is in short supply.	A tortoise has no teeth but instead has a sharp saw blade jaw for clipping off plants.
Hawks have sharp claws to help them catch and kill their prey.	Whales migrate to warmer waters to calve and to ensure a good food supply.	Bees perform a kind of dance to tell other Bees the location of a food source.
