

MATCHING ALKALI METAL

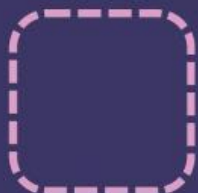

Drag each alkali metal below to its correct description.

The lightest metal; floats on water;
powers rechargeable batteries.

Reacts violently with water; produces yellow
light in street lamps; found in table salt.

Essential for plant growth and heart
health; reacts quickly with moisture.

A rare, soft metal that melts on a hot day
and burns with a red flame.

Melts in your warm hand; explodes on
contact with water; used in atomic clocks.

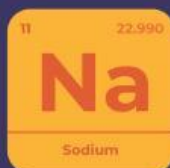

Extremely rare and radioactive; exists
only for minutes; no practical uses.
