## Parts of a Plant

**Directions:** Match each part of the plant to its function.

| Plant Part                                                                                      | Function                                               |
|-------------------------------------------------------------------------------------------------|--------------------------------------------------------|
| <br>1. leaf    | It helps the plant make seeds and fruits.              |
| <br>2. flower  | It makes food for the plant using sunlight.            |
| <br>3. stem    | They take in water and minerals from the soil.         |
| <br>4. roots | It holds the plant upright and carries food and water. |
