

A) Solve the following addition problems.

1)	$82 + () = 140$	2)	$97 + () = 131$	3)	$45 + () = 112$
4)	$69 + () = 112$	5)	$86 + () = 125$	6)	$() + 88 = 111$
7)	$() + 14 = 112$	8)	$() + 96 = 115$	9)	$() + 64 = 140$
10)	$() + 69 = 154$	(a) $+ () = -$ (b) $() + = -$ Example: (a) $20 + (5) = 25$ Solution: $25 - 20 = 5$ (b) $(5) + 20 = 25$ Solution: $25 - 20 = 5$
