

Read this article about "Butterflies" and then, choose the best option.

The butterfly is a flying insect with two wings and two antennae. They have three main body parts: the head, thorax and abdomen. Butterflies have a long proboscis, or tongue, that they use to drink nectar from plants.

Butterflies come in different colours and sizes. The world's smallest butterfly, "The Blue Pygmy", has a wingspan the size of a nickel. The world's biggest butterfly, "Queen Alexandra's Birdwing", has a wingspan of 12 inches!

When you see a butterfly, you must enjoy the moment. The lifespan of most butterflies is only 20 to 40 days. Some butterflies only live for three to four days.

A butterfly starts as an egg and grows into a caterpillar. The caterpillar then forms a hard shell called a chrysalis. Inside of the chrysalis, the caterpillar turns into a butterfly.

You can find butterflies anywhere in the world, except for Antarctica. Why do you think butterflies don't live there?

1- The butterfly has three main body parts, which include...

- a- head, wings and antennae.
- b- wings, feet and arms.
- c- Head, thorax and abdomen.
- d- Head, knees and toes.

2- Butterflies have a long proboscis. What is proboscis?

- a- An eye.
- b- A wing.
- c- The thorax.
- d- A tongue.

3- The world's smallest butterfly is...

- a- The Blue Pygmy.
- b- The Monarch Butterfly.
- c- The White Admiral.
- d- Queen Alexandra's Birdwing.

4- About how long do most butterflies live?

- a- About 30 days.
- b- About 12 days.
- c- About 6 months.
- d- About 40 days.

5- How do caterpillars grow into butterflies?

- a- A caterpillar forms a chrysalis and inside this shell, it turns into a butterfly.
- b- A caterpillar lays an egg and a butterfly makes a chrysalis.
- c- A caterpillar lays eggs in a shell or chrysalis and butterflies appear.
