

1. ARRASTRA CON EL DEDO LOS NÚMEROS MORADOS AL ESPACIO QUE LES CORRESPONDE (EL 7 Y EL 5) Y REALIZA LA SUMA ($7 + 5 = 12$).
2. RELLENA EL CÍRCULO VERDE Y EL CÍRCULO MORADO CON LOS NÚMEROS QUE LES CORRESPONDEN (1 Y 2), POR ÚLTIMO REALIZA LA SUMA: $1 + 3 + 1 = 5$.

EJERCICIO 7.

Diagram for Exercise 7 (left). It shows a vertical addition problem on a wooden background. The first addend has a tens digit '2' in a green box and a ones digit '2' in a pink box. The second addend has an empty green box for the tens digit and an '8' in a pink box for the ones digit. A red line connects the '2' in the first addend's ones place to the tens place of the second addend. Below the addends is a horizontal line, and below that are two empty boxes (green for tens, pink for ones) for the sum. To the right, there is a separate addition problem with two empty pink boxes stacked vertically, separated by a plus sign and a horizontal line. Below this is a green circle and a pink circle. Red lines connect the green circle to the tens place of the second addend and the pink circle to the ones place of the sum.

Diagram for Exercise 7 (right). It is identical to the left version, but with a green circle in the tens place of the first addend. A red line connects this green circle to the tens place of the second addend. The sum is represented by two empty pink boxes stacked vertically, with a plus sign and a horizontal line between them. Below this is a green circle and a pink circle. Red lines connect the green circle to the tens place of the second addend and the pink circle to the ones place of the sum.

EJERCICIO 8.

Diagram for Exercise 8 (left). It shows a vertical addition problem on a wooden background. The first addend has a tens digit '1' in a green box and a ones digit '4' in a pink box. The second addend has a tens digit '1' in a green box and a ones digit '9' in a pink box. A red line connects the '4' in the first addend's ones place to the tens place of the second addend. Below the addends is a horizontal line, and below that are two empty boxes (green for tens, pink for ones) for the sum. To the right, there is a separate addition problem with two empty pink boxes stacked vertically, separated by a plus sign and a horizontal line. Below this is a green circle and a pink circle. Red lines connect the green circle to the tens place of the second addend and the pink circle to the ones place of the sum.

Diagram for Exercise 8 (right). It is identical to the left version, but with a green circle in the tens place of the first addend. A red line connects this green circle to the tens place of the second addend. The sum is represented by two empty pink boxes stacked vertically, with a plus sign and a horizontal line between them. Below this is a green circle and a pink circle. Red lines connect the green circle to the tens place of the second addend and the pink circle to the ones place of the sum.

EJERCICIO 9.

Diagram for Exercise 9 (left). It shows a vertical addition problem on a wooden background. The first addend has a tens digit '1' in a green box and a ones digit '9' in a pink box. The second addend has a tens digit '1' in a green box and a ones digit '7' in a pink box. A red line connects the '9' in the first addend's ones place to the tens place of the second addend. Below the addends is a horizontal line, and below that are two empty boxes (green for tens, pink for ones) for the sum. To the right, there is a separate addition problem with two empty pink boxes stacked vertically, separated by a plus sign and a horizontal line. Below this is a green circle and a pink circle. Red lines connect the green circle to the tens place of the second addend and the pink circle to the ones place of the sum.

Diagram for Exercise 9 (right). It is identical to the left version, but with a green circle in the tens place of the first addend. A red line connects this green circle to the tens place of the second addend. The sum is represented by two empty pink boxes stacked vertically, with a plus sign and a horizontal line between them. Below this is a green circle and a pink circle. Red lines connect the green circle to the tens place of the second addend and the pink circle to the ones place of the sum.

EJERCICIO 10.

Diagram for Exercise 10 (Left): A vertical addition problem on a wooden background. The first addend is 15 (green tens digit, pink ones digit). The second addend is 29 (green tens digit, pink ones digit). A red line is drawn under the second addend. To the right, there is a green circle and a pink circle. A red line connects the pink circle to the pink ones digit of the first addend. Below the horizontal line, there are two empty boxes: a green one for the tens digit and a pink one for the ones digit. A red line connects the pink ones digit to the pink ones box.

Diagram for Exercise 10 (Right): Similar to the left diagram, but with a green circle above the first addend. A red line connects the green circle to the green tens digit of the first addend. A red line also connects the green circle to the green tens box in the result. The pink circle is connected to the pink ones digit of the first addend and the pink ones box in the result.

EJERCICIO 11.

Diagram for Exercise 11 (Left): A vertical addition problem on a wooden background. The first addend is 28 (green tens digit, pink ones digit). The second addend is 28 (green tens digit, pink ones digit). A red line is drawn under the second addend. To the right, there is a green circle and a pink circle. A red line connects the pink circle to the pink ones digit of the first addend. Below the horizontal line, there are two empty boxes: a green one for the tens digit and a pink one for the ones digit. A red line connects the pink ones digit to the pink ones box.

Diagram for Exercise 11 (Right): Similar to the left diagram, but with a green circle above the first addend. A red line connects the green circle to the green tens digit of the first addend. A red line also connects the green circle to the green tens box in the result. The pink circle is connected to the pink ones digit of the first addend and the pink ones box in the result.

EJERCICIO 12.

Diagram for Exercise 12 (Left): A vertical addition problem on a wooden background. The first addend is 27 (green tens digit, pink ones digit). The second addend is 35 (green tens digit, pink ones digit). A red line is drawn under the second addend. To the right, there is a green circle and a pink circle. A red line connects the pink circle to the pink ones digit of the first addend. Below the horizontal line, there are two empty boxes: a green one for the tens digit and a pink one for the ones digit. A red line connects the pink ones digit to the pink ones box.

Diagram for Exercise 12 (Right): Similar to the left diagram, but with a green circle above the first addend. A red line connects the green circle to the green tens digit of the first addend. A red line also connects the green circle to the green tens box in the result. The pink circle is connected to the pink ones digit of the first addend and the pink ones box in the result.

EJERCICIO 13.

Diagram for Exercise 13 showing a vertical addition problem on a wooden background. The first addend is 26 (green square 2, pink square 6) and the second addend is 39 (green square 3, pink square 9). A red line connects the 6 and 9 to a green circle and a pink circle. The sum is shown in two pink boxes. A red line connects the 2 and 3 to the top pink box.

Diagram for Exercise 13 showing a vertical addition problem on a wooden background. The first addend is 26 (green square 2, pink square 6) and the second addend is 39 (green square 3, pink square 9). A red line connects the 6 and 9 to a green circle and a pink circle. The sum is shown in two pink boxes. A red line connects the 2 and 3 to the top pink box.

EJERCICIO 14.

Diagram for Exercise 14 showing a vertical addition problem on a wooden background. The first addend is 25 (green square 2, pink square 5) and the second addend is 16 (green square 1, pink square 6). A red line connects the 5 and 6 to a green circle and a pink circle. The sum is shown in two pink boxes. A red line connects the 2 and 1 to the top pink box.

Diagram for Exercise 14 showing a vertical addition problem on a wooden background. The first addend is 25 (green square 2, pink square 5) and the second addend is 16 (green square 1, pink square 6). A red line connects the 5 and 6 to a green circle and a pink circle. The sum is shown in two pink boxes. A red line connects the 2 and 1 to the top pink box.

EJERCICIO 15.

Diagram for Exercise 15 showing a vertical addition problem on a wooden background. The first addend is 17 (green square 1, pink square 7) and the second addend is 24 (green square 2, pink square 4). A red line connects the 7 and 4 to a green circle and a pink circle. The sum is shown in two pink boxes. A red line connects the 1 and 2 to the top pink box.

Diagram for Exercise 15 showing a vertical addition problem on a wooden background. The first addend is 17 (green square 1, pink square 7) and the second addend is 24 (green square 2, pink square 4). A red line connects the 7 and 4 to a green circle and a pink circle. The sum is shown in two pink boxes. A red line connects the 1 and 2 to the top pink box.

EJERCICIO 16.

Diagram for Exercise 16 (left). It shows a vertical addition problem on a wooden background. The first addend is a two-digit number with a tens digit of 2 and a units digit of 6. The second addend is a two-digit number with a tens digit of 2 and a units digit of 8. Below the addends is a horizontal line, followed by a box for the tens digit of the sum and a box for the units digit. To the right of the boxes are two empty circles, one green and one pink. Red lines connect the units digit of the first addend (6) to the units box, and the units digit of the second addend (8) to the units box. Another red line connects the tens digit of the first addend (2) to the tens box. A third red line connects the tens digit of the second addend (2) to the tens box. To the right of the circles is another vertical addition problem with two empty boxes for the sum.

Diagram for Exercise 16 (right). It is identical to the left diagram, but with a green circle above the first addend and a pink circle above the second addend. Red lines connect the green circle to the tens box and the pink circle to the units box. The second vertical addition problem to the right is also identical.

EJERCICIO 17.

Diagram for Exercise 17 (left). It shows a vertical addition problem on a wooden background. The first addend is a two-digit number with a tens digit of 3 and a units digit of 4. The second addend is a two-digit number with a tens digit of 3 and a units digit of 6. Below the addends is a horizontal line, followed by a box for the tens digit of the sum and a box for the units digit. To the right of the boxes are two empty circles, one green and one pink. Red lines connect the units digit of the first addend (4) to the units box, and the units digit of the second addend (6) to the units box. Another red line connects the tens digit of the first addend (3) to the tens box. A third red line connects the tens digit of the second addend (3) to the tens box. To the right of the circles is another vertical addition problem with two empty boxes for the sum.

Diagram for Exercise 17 (right). It is identical to the left diagram, but with a green circle above the first addend and a pink circle above the second addend. Red lines connect the green circle to the tens box and the pink circle to the units box. The second vertical addition problem to the right is also identical.

EJERCICIO 18.

Diagram for Exercise 18 (left). It shows a vertical addition problem on a wooden background. The first addend is a two-digit number with a tens digit of 3 and a units digit of 9. The second addend is a two-digit number with a tens digit of 2 and a units digit of 8. Below the addends is a horizontal line, followed by a box for the tens digit of the sum and a box for the units digit. To the right of the boxes are two empty circles, one green and one pink. Red lines connect the units digit of the first addend (9) to the units box, and the units digit of the second addend (8) to the units box. Another red line connects the tens digit of the first addend (3) to the tens box. A third red line connects the tens digit of the second addend (2) to the tens box. To the right of the circles is another vertical addition problem with two empty boxes for the sum.

Diagram for Exercise 18 (right). It is identical to the left diagram, but with a green circle above the first addend and a pink circle above the second addend. Red lines connect the green circle to the tens box and the pink circle to the units box. The second vertical addition problem to the right is also identical.
