

TEORIA DE EXPONENTES

1.- Resolver:

$$8^3 \cdot 8^7 \cdot 8^5 = \quad =$$

$$\left(\left((9)^3\right)^2\right)^0 = \quad = \quad =$$

$$\frac{4^{15}}{4^{12}} = \quad = \quad =$$

$$\left(\frac{1}{6}\right)^{-2} = \quad =$$

$$\left(\left((5)^2\right)^1\right)^1 = \quad = \quad =$$
