**For each question choose the correct answer**

Edible water bottle

You can drink from it, you can sip from it, but have you ever eaten of water? As water is an important ingredient of our body (65 percent of it is water), we should drink of it. But how ? A litre is too but it is believed that two litres is enough. But when you drink a lot of water a week, the problem of plastic bottles appears. Why is it problematic? Because it takes 700 years for the material to decompose! That is why, three students from London have come up with an alternative: an edible water bottle made of . It is ecological and healthy, and it is tasteless. Those who have tried eating it say it's amazing and funny experience.
