

# Parts of a Flower

Label the parts of the flower. Drag and drop.

Petal

Pedicel

Filament

Style

Anther

Stamen

Pistil

Pollen

Stigma

Ovary

Ovule

## Pollination

Watch the video and fill in the blanks.

Pollination is the process of \_\_\_\_\_ from one \_\_\_\_\_ to another. This causes \_\_\_\_\_ which makes new \_\_\_\_\_ grow. Not just flowers but \_\_\_\_\_, veggies and \_\_\_\_\_. Bees are \_\_\_\_\_ for over 80% of all \_\_\_\_\_. And there are some \_\_\_\_\_ that rely solely on \_\_\_\_\_ in order to grow like \_\_\_\_\_. Without the honeybee they \_\_\_\_\_ even exist. A world \_\_\_\_\_ almonds? Now that's nuts!
