

Tiny House Boat, Quebec, Canada

Tiny homes have become very popular in North America. But how about a tiny house on water? Richard Le Koroc has built a lovely little house boat all by hand which you can use not only for fishing and swimming but also sleeping, cooking and relaxing.

Richard is a woodworker and he built his tiny boat house all by hand with beautiful details. Although small, the house has a full kitchen with sink, cooker, refrigerator, shelves and cupboards. The dining table turns into a bed and there is a full bathroom with sink, toilet and shower. There are lots of windows for ventilation and amazing lake views.

The house is well-equipped for your energy needs. There is a propane tank for heating and cooking and a solar panel for electricity. There is a gas motor for moving the boat and a water filtration system.

And of course, there is a lovely deck where you can fish, relax and enjoy the view. What do you say? Is the tiny house boat for you?

Write T or F next to the sentences.

- 1 Le Koroc produced his house in a factory.
- 2 The tiny house has a bedroom.
- 3 You can prepare meals in the kitchen.
- 4 The cooker is powered by a solar panel.
