Fizz inflator experiment

VOCABULARY

1. Fill in the blanks.

2. Put the numbers to follow steps in order.

Loosen up the balloon by stretching it a few times and then use the funnel to fill it a bit more than half way with baking soda.

Lift the balloon up so that the baking soda falls from the balloon into the bottle and mixes with the vinegar.

Put the neck of the balloon all the way over the neck of the bottle without letting any baking soda into the bottle.

Pour the vinegar into the bottle.

3. Write the material you need to make the experiment.
4. Write in order the words: **finally, next, first, then** to follow the steps.
5. Drag the instructions above and drop in the correct order.
