

Removing Brackets

To remove a bracket we take the term outside the bracket and multiply it by every term in the bracket.

Example 1: $4(m + 4) = 4m + 16$

1. $6(m + 3)$

2. $7(m + 6)$

3. $9(m - 1)$

4. $3(3m + 1)$

5. $5(4m - 2)$

6. $3(3m + 3)$

7. $4(m - 1)$

8. $2(2m - 9)$

9. $8(3m + 3)$

10. $6(m - 1)$
