3. Answer the question based on the dialog

Erin : Good evening, it is pleasure to meet you, Ma'am. Are you the mother of baby Laila Hanan, age 6 months old? can you please describe the illness of baby Laila briefly?

Wanda: Good evening, yes, I am. Last week she had a rash around her bottom, I assume the cause is her diaper. I tried to treat it with a medicine powder, but to no avail. Laila was so annoyed by the rash, hence the reason I bring her this evening to dr. Aliyah. And, dr. Aliyah prescribe me this... I don't know. It's like a cream or a lotion for me.

Erin : Thank you, Mrs. Wanda. This medicine is called Babythenol, with dexpanthenol as the main ingredient. Dexpanthenol is an ingredient formulated to treat rash, skin burn, itchiness on skin, and also irritations. **If you are going to use this this cream to treat baby Laila's rash, apply a good amount of this cream around her bottom 2 times a day after bathing time, when her skin is still damp.** Also, make sure to store it in the room temperature and use it for the next two weeks. **If her rash is not getting better, you should bring her back to dr. Aliyah to get intensive treatment.**

Wanda: Thank you very much for the explanation, Miss Erin. I will make sure to do everything you just explain.

Erin : Thank you for being so cooperative for you daughter, Ma'am. I hope baby Laila will be better soon.

A. What cause of the baby Laila's mother visit the peditrician?

B. Why it is importat to store the cream in the room temperature?

C. What can be infer from the dialog above?
